

Routine Vaccine Schedule

At WeeCare For Kids, we are committed to your child’s health but also to your whole family. The below schedule is the routine schedule but can be adjusted to fit your baby’s and family’s needs. We are happy to answer any questions you have about vaccinations and alternative schedules.

ALL of our vaccines are thimerosol (mercury) free!

Age	DTaP	IPV	HIB	HBV	Pevnar	Rotavirus	Varivax	MMR	TDaP	Menactra	Gardasil

10 yr									●		
8 th Grade										●	
High School											3 doses

DTaP (Diphtheria, Tetanus, Pertussis): bacteria in the community that causes serious illnesses of the throat.

IPV (Inactivated Polio Virus): causes nerves (especially legs) of the body to stop working properly.

HIB (Haemophilus Influenzae Type B): bacteria that can cause serious infections throughout the body including ears, sinuses, and brain (meningitis).

HBV (Hepatitis B Virus): a virus that destroys the liver over time.

Pevnar (Streptococcus Pneumonia): protects against 13 serotypes of this bacteria that causes serious infections throughout the body including ears, sinuses, and brain (meningitis).

Rotovirus: a virus that causes vomiting and diarrhea. This vaccine is oral (given by mouth).

Varivax: (Chickenpox): a virus that causes that red, itchy rash.

MMR (Measles, Mumps, Rubella): viruses that cause rash, flu-like illnesses. This vaccine can no longer be separated.

TDaP (Tetanus, Diphtheria, Pertussis): the big kid version of the above DTaP. This is a booster dose.

Menactra (Meningococcal): a bacteria that causes a very dangerous and deadly brain infection.

Gardasil (Human Papillomavirus (HPV)): a virus that can cause genital warts and cervical cancer.

Combination vaccines available: **Pentacel** (DTaP, IPV, Hib) – given at age 2, 4, 6 months
Kinirix (DTaP, IPV) – given at age 4 years
Proquad (MMR, Varivax) – given at age 4 years

Other vaccines available but not given routinely in our practice: **Hepatitis A Vaccine**, yearly **Influenza Vaccine**
